

Take THE™ Anti-His mAb Challenge!

- » THE™ Anti-His mAb is the best on the market.
- » Try to find a better one.
- » GenScript will refund winners' anti-His antibody purchase.

THE™ Anti-His mAb

- ★ *Superior Sensitivity* — **The most sensitive anti-His mAb on the market.**
- ★ *High Specificity* — **Shows no cross-reactivity with any expression host protein.**
- ★ *Excellent Affinity* — **Markedly lower dissociation constant K_d .**
- ★ *Enhanced Binding* — **The best anti-His mAb for partially exposed 6xHis-tag.**
- ★ *Long-Lasting Stability* — **Stable in lyophilized form for at least two years.**

For a limited time, GenScript offers THE™ Anti-His mAb at a **30%** discount.
Promotion code: **G070183** **Free Samples Available: A00186**

Description:

GenScript's monoclonal anti-polyhistidine antibody, THE™ Anti-His mAb, recognizes native and denatured reduced forms of synthetic polyhistidine and polyhistidine-tagged fusion proteins. This mouse monoclonal IgG1 antibody shows both high affinity and specificity to 6xHis-tags and can recognize 4xHis- and 5xHis-tags as well. It is produced in mouse ascites and purified by protein G affinity column. It reacts with His-tagged fusion proteins expressed either from prokaryotic pET, pGS expression vectors, or eukaryotic expression systems and recognizes internal and terminal His-tags. It is applicable in Western blotting, dot blotting, immunoprecipitation, immunofluorescent staining, flow cytometry, and ELISA.

Dilutions: (The lyophilized THE™ Anti-His mAb may be reconstituted to 1 mg/ml)

Application	Western blot	Immunoprecipitation	FACS	ELISA
Dilution factor	1:5,000-10,000	1:1,000	1:1,000	1:10,000-100,000

Examples:**1. Western Blots of 6xHis-Tagged Proteins****2. Dot Blot Detection of 5xHis-GST in Whole Cell Lysates**
