

pRNAin-H1.2/Shuttle

Cat. No. SD1234

Description: pRNAin-H1.2/Shuttle is a GenScript adenoviral siRNA shuttle vector. It uses an inducible H1 promoter* for siRNA expression. This promoter contains a tetracycline operator (TetO1). As a competitor, tetracycline or doxycycline can bind this operator to remove the blockade of tetracycline repressor (TetR) from H1 promoter and induce the transcription of siRNA. The vector also contains a neomycin resistance gene under SV40 promoter control for establishing stable cell line.
