Subject: GenScript's Self-Attestation Regarding the Framework for Nucleic Acid Synthesis Screening.

Dear Valued Partner,

President Joe Biden signed the Executive Order on the Safe, Secure, and Trustworthy Development and Use of Artificial Intelligence (Executive Order 14110) in October 2023.

This Executive Order calls, in part, for the White House Office of Science and Technology Policy to develop and implement a "[Framework for Nucleic Acid Synthesis Screening](#)." The Framework calls for all nucleic acid synthesis providers to take steps to screen to-be-manufactured nucleic acid sequences for sequences of concern and provide a self-attestation to this effect. GenScript has been screening to-be-manufactured nucleic acids for sequences of concern for more than 10 years.

GenScript hereby self-attests its compliance with the US Framework for Nucleic Acid Synthesis Screening, in accordance with 4(b) of the Executive Order on the Safe, Secure, and Trustworthy Development and Use of Artificial Intelligence.

Should the information check above change, GenScript agrees to update this statement promptly.

GenScript is committed to maintaining the highest standard in its operations. GenScript is a founding member of the International Gene Synthesis Consortium (IGSC), which was formed to design and apply protocols to screen for sequences of concern, and continues to work with biosecurity stakeholders in government and academia.

Sincerely,

Kening Li, J.D., Ph.D.  
General Counsel and Chief Compliance Officer

Raymond R Miller, Ph.D.  
Head of Corporate Communications
